

# NIC Release Notes

NIC Release Version 1.9 is a major maintenance release with some new functionality.

**NIC**distributor

**NIC**agent

## What's new in Version 1.9

### ✦ **NIC Distributor App:**

#### ✦ **Content Controls:**

In order to respond to requests to view books of business and insights specific to a business unit not directly identified as the current user, a new control has been added to the top-level page context. This "Context" control allows a user to change the contextual profile being viewed, and allows administrators, managers, and users granted on-behalf-of access the ability to view the materials pertinent to one or more specific alternate business units.

Changing the context in the Context Control will change left-navigation items of "Book of Business", "Insights" and "Explore" to reflect those belonging to the newly selected context (such as a distributor or region), and will also switch the "My Profile" details to match those of the new context. To revert to the user's directly owned context, select "My Profile" from the Context control.

#### **Important Notes:**

1. Lists created under 'My Profile' are separate from those lists created in an alternate context.
2. Documents will always show only the logged-in user's documents, and exist independent of the Context control. Documents shared with a user or an office can be seen by any user who has data access to that user or office.

### ✦ **Bug Fixes**

- ✦ Minor bug fixes in the NIC Distributor and NIC Agent Apps.
